

Clinical and Safety Evaluation (CASE Rx)SM

Helping claims professionals address inappropriate, ineffective, or unnecessary drug therapies.

The CASE RxSM program provides comprehensive reviews of patient medication usage to enhance overall treatment outcomes. Our expert workers' comp-focused clinical pharmacists help you by identifying inappropriate use of medications and providing recommendations to resolve or mitigate adverse patient outcomes and reduce treatment cost.

Treating injured patients presents many unique challenges and can often become problematic. Many injured patients are prescribed opioid therapy and other risky medications with high potentials for serious adverse health effects from inappropriate use. Between 250,000-440,000 people die from medical errors in the U.S. every year (Sipherd, 2018).

CASE Rx provides comprehensive, objective, and evidence-based assessments of prescription drug use. The program's primary focus is to identify and correct potential medication

errors as well as inappropriate or inefficient use of medications. Prescribers also receive a recommendation when a lower cost, yet equally effective, alternative medication is available. A teleconference with a treating provider and a myMatrixx clinical pharmacist may be utilized to drive implementation of the CASE Rx program.

The expert clinical team at myMatrixx is equipped to perform CASE Rx reviews for any injury or disease condition from the ubiquitous lower-back injury to more complicated and rare cases such as traumatic brain injury.

On every case, the clinical team is dedicated to providing valuable clinical insight and actionable recommendations that have the potential of positively affecting the course of therapy and the patient's overall condition.

With CASE Rx, you'll receive expert pharmacy claims analysis and intervention that can lead to a significant reduction in drug therapy costs.

Interaction	Severity	Summary
IR and Clonidine-APAP	Major	Increased risk of respiratory and CNS depression.

Medication	Recommendation	Rationale/Summary
IR 50 mg IR daily oxycodone-APAP 325 mg IR daily	Consider gradual dose reduction and discontinuation	<ul style="list-style-type: none"> IR 50mg oxycodone appears balanced at this time; however, If there are no clinical contraindications, periodic attempts to taper and discontinue opioid therapy are recommended in an effort to reduce the potential for abuse or the development of physical or psychological dependence
5 mg IR daily	Consider switching to diclofenac potassium 50 mg % tablet as needed	<ul style="list-style-type: none"> Diclofenac potassium 50 mg may provide comparable efficacy and tolerability at a reduced cost
IR 30 mg IR daily	Consider switching to 60 mg once daily	<ul style="list-style-type: none"> Duloxetine is clinically appropriate for treatment of chronic pain and may be taken once daily
100 mg IR daily	No changes	<ul style="list-style-type: none"> Gabapentin is an appropriate first-line agent for the treatment of neuropathic pain According to documentation in the progress notes, the patient was unable to tolerate gabapentin Generic is an extended-release formulation of gabapentin that causes less sedation than generic gabapentin
10 mg IR daily	No changes	<ul style="list-style-type: none"> Current evidence supports off-label use of doxepin for insomnia
IR 25 mg daily gabapentin IR 3000 IR daily	No changes	<ul style="list-style-type: none"> Movantik is FDA approved for the treatment of opioid-induced constipation Polyethylene glycol may be used as needed if there is a suboptimal response to Movantik after 3 days

With **CASE Rx**, you can manage excessive or unnecessary drug spending.

CASE Rx FEATURES

myMatrixx's CASE Rx program marries the best of human and technological intelligence to provide an end-to-end solution for managing pharmacy benefits for potentially at-risk patients.

CASE Rx CLINICAL TEAM

In addition to being highly trained and credentialed clinical pharmacists, myMatrixx's pharmacists are laser-focused on the field of workers' compensation. We understand the intricacies of the system, the unique treatment environment, the mindset of providers, and underlying incentives that too often protract the claim. We are up-to-date with state workers' compensation guidelines and leverage that knowledge to strengthen our assessments and recommendations.

Our pharmacists are available for consultation at any time during the process. They can explain any potential issues with the patient's drug regimen and develop a plan for intervention. You can also express any specific goals you would like to achieve with the CASE Rx review.

myMatrixx myDataSenseSM CLINICAL ANALYTICS RESULTS ENGINE (CARE)

- An innovative business intelligence program
- Identifies and measures clinical utilization patterns
- A highly effective tool for identifying potentially at-risk patients
- Transforms clinical analytics into actionable intelligence
- Monitors outcomes post intervention
